

Savix.org – Presale Investor Information

Vision and Use Case:

Savix' main objective is to let investors profit as much as possible from new opportunities created by decentralized finance with as less barriers as possible. Staking works fully automated while keeping full flexibility of token usage.

Using Savix multiple income streams can be combined simultaneously.

Savix is a good collateral for decentralized finance because, it is

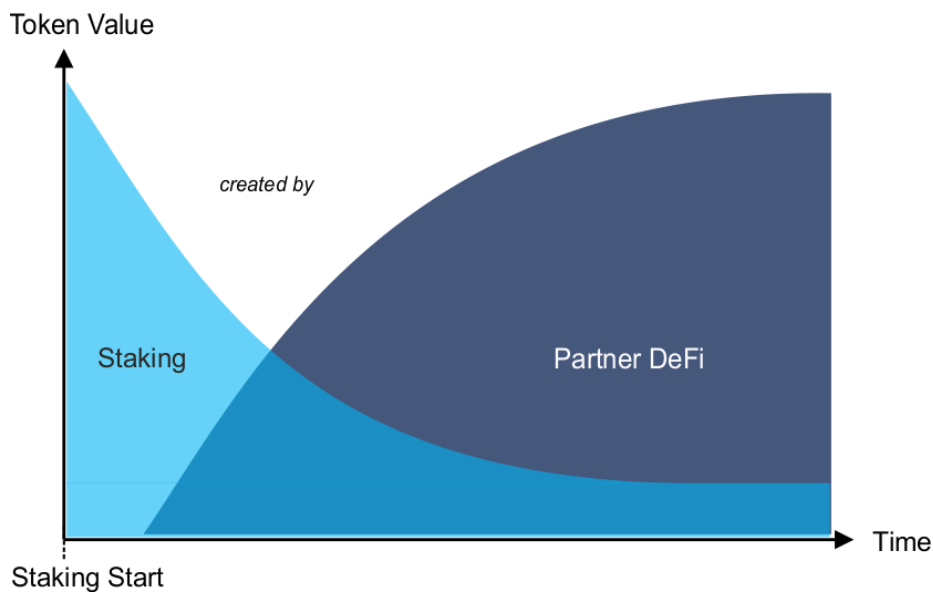

- Multi-Beneficiary, enabling multiple simultaneous profit opportunities
- Convenient, 100% passive with no need for user decisions or interactions
- Flexible, being compatible with any Ethereum based DeFi project
- Fair, adjusting balances “non-dilutively”, not preferring big holdings
- Transparent, open-source, unambiguous and not manipulable supply
- Stable, not creating selling incentives after locking periods

Unique Investment Proposition:

- 85% APY in the first year
- Ready-to-run Product: Real time staking starts shortly after end of sale
- Very scarce supply of 100,000 tokens
- Long term “hype potential”: several additional developments ready to be implemented; flexible use as collateral enables profiting from new DeFi hypes arising
- Great growth potential due to broad target group: Ordinary DeFi users including beginners, not technically experienced only
- Discount of 20% for all tokens during presale

Token Value And ROI

Savix staking mechanics are designed so that staking rewards will be highest during the early project stages. While the height of staking rewards will slowly be reduces by time the amount of partnerships with DeFi projects, for which SVX tokens can be used as collateral, will increase as well as the functionalities of the Savix DeFi dashboard will. The more time since Savix trading started will have passed the more of Savix tokens' value will come from its ability to enable easy usage of DeFi products having partnered with Savix.

For a sample wallet of 100 SVX the expected returns of the embedded staking mechanism within the first year are the following:

Short Term Profits

Days	0	1	2	5	10	20
Balance [SVX]	100	102.14	104.29	110.71	116.96	123.48
Daily Interest [%]	0	2.14	2.10	1.97	0.56	0.53
Daily Interest Avg. [%]	0	2.14	2.12	2.06	1.58	1.06
Yearly Interest [%]	0	770.40	763.20	740.35	569.11	382.49

Long Term Profits

Days	30	60	90	180	360	720
Balance [SVX]	130	136	142	160	185	240
Daily Interest [%]	0.50	0.15	0.14	0.13	0.08	0.06
Daily Interest Avg. [%]	0.88	0.52	0.39	0.26	0.17	0.12
Yearly Interest [%]	316.92	185.55	140.98	94.38	61.71	43.88

Token Akquisition:

Savix tokens (SVX) can be obtained in three ways:

Presale / IEO	50-60 SVX / ETH (up to 20% discount)
Uniswap liquidity pool (Public Sale)	50 SVX / ETH (Original Issue Price)
Exchanges	50 SVX / ETH (Original Issue Price)

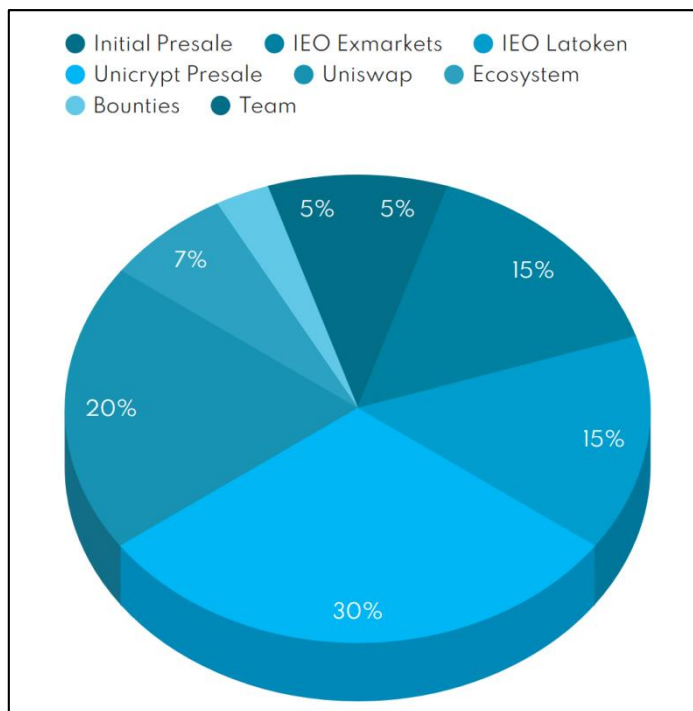

The introductory price of the SVX token at the market will be 50 SVX / ETH. A private sale will not be executed. Public presale will be spilt into three phases, each phase – and possible

sub-phase - having different discounts and processors. The public sale will start at Uniswap first and then be extended to traditional exchanges for increasing the reach of the token.

Token Distribution & Budget Allocation

- 5% Initial Public Presale
- 15% IEO Exmarkets
- 15% IEO Latoken
- 30% Unicrypt Presale
- 20% Uniswap Liquidity (Public Sale)
- 7% Ecosystem Fund
- 3% Bounty Program
- 5% Team

Unsold tokens will be burned.

BUDGET ALLOCATION (ETH):

- 36% Uniswap Liquidity
- 7% Ecosystem Fund*
- 30% Further Development
- 17% Marketing
- 10% Reserve

**The ecosystem fund is used for investments into the ecosystem, eg as guarantee for partnerships or as bonus for influencers.*

Liquidity Pool:

Shortly after the presale we will list Savix on Uniswap for public trading.

- Initial Price: 1 ETH = 50 SVX
- Estimated Liquidity (Presale Goal Reached): ~ 800.000 USD (Depends on Ethereum volatility and presale results)
- Estimated Market Cap: ~ 2.000.000 USD

The Uniswap Pool will be locked for 6 months, long enough to build trust with the community. Locking the pool longer than necessary represents a certain risk to the liquidity in case the Savix contract needs to be updated or migrated in the future.

Liquidity locking will be processed by Unicrypt.network, a professional service provider specialized on liquidity locking. Team tokens will be locked for 3-6 months as well, processed by team.finance.

Ecosystem Fund:

An Ecosystem Fund in SVX and ETH will be maintained. This Fund will be used to incentivize long-term holding of Savix through various ways, for instance contests among holders, to engage influencers and to support partnerships with other DeFi projects . The fund will start with 7% of the total Savix supply and 7% of the amount of Ethereum raised in the presale.

Presale Procedure:

The public presale will be carried out in three phases (see Tocnomics above):

- Initial Public Presale (5%)
- IEO Launchpads (30%)
- Decentralized Unicrypt Launchpad (30%)

The advantage of executing the presale in cooperation with different partners is that the different resources and markets of the partners will complement each other:

- User base and social environment (type of investors acquainted with the partner's business strategy and technology)
- Marketing resources and strategies

Combining these resources an estimated market cap of around 2.000.000 USD is aimed to be achieved at the start of public trading. This should be large enough to absorb smaller dumps of earlier holders trying to get their secure wins by the arbitrage between presale and market prizes. Since the staking mechanism starts directly at the start of trading at strong incentive to hold is set from the beginning.

Market Perspective:

The target group of ordinary DeFi users including beginners, not only technically experienced, combined with a very easy-to-use product opens up a very large market for potential future growth.

Marketing experience collected during the presale cooperation will enable a solid long term marketing strategy for Savix. Upcoming partnerships with other DeFi projects and the release of the Trinary dapp in the first half of 2021 will support a steady flow of positive news and continuous feed of hype around the project. Therefore a solid growth in value of up to 1000% and more can be expected within the first months after trading starts
